Please note that physical compatibilities may not be approved tank-mixes. The tests do not check for any adverse crop phytotoxicity or for the biological efficacy of the individual components when applied in a tank-mix. Bayer CropScience gives no warranty and accepts no liability in respect of physical compatibilities; therefore, use is at grower's own risk.

Mobius may be applied in specified tank-mixtures. The matrix charts the recommended Herbicide, PGR and Fungicide compatibilities.

Please note that only tank mixtures selected from a single column and a single row are recommended, e.g. Mobius + chlorothalonil + Eagle.

Mobius + Axial + Adigor	Mobius + Centaur	Mobius + Flexity	Mobius + Swipe										
(Adigor last)													

Mobius + Stronghold

### Tank-mix precautions

#### **PGR tank mixtures**

Mobius + Canopy

Mobius may be applied, before crop GS32, in mixture with one of the following (dose/ha): -

Mobius + Cyflamid

Moddus 0.2L + chlormequat 1.25L (winter wheat)

Moddus 0.1L + chlormequat 1.25L (winter barley - light soils or malting crops)

Moddus 0.2L + chlormequat 1.25L (winter barley - Other soils and feed crops)

Before using any of the mixtures shown above, first check the manufacturer's latest recommendations for Moddus.

DO NOT use Mobius + Moddus + chlormequat on Spring Barley.

## Adjuvants

In soft crops avoid the use of tank-mixtures with HBNs, Atlantis WG + biopower or Pacifica + biopower. In particular, tank mixtures with EC fungicide formulations as this may result in transitory adverse crop effects.

# Sulphonyl Ureas (SU)

All sulphonyl urea herbicides have the potential to cause damage to sensitive crops if residues are left in the spray tank. For this reason sprayer hygiene following the use of SU + chlorothalonil + Mobius is very important. Sprayers should always be thoroughly cleaned out with a proprietary sprayer cleaner immediately after use. This should always take place, even if further cereal crops have been treated by the sprayer between the last application SU mixtures and a subsequent broad leaved crop.

# Cheetah Super, Grasp or Topik

Adjuvant oil recommended by the herbicide manufacturer may be added in mixes with Mobius. Do NOT use any of these herbicides in mixes with Mobius + Moddus + chlormequat.

### **Trace Elements**

These products are physically compatible only, there is no information on crop safety available

## **General Precautions**

For any tank-mix it is important that the appropriate manufacturer's recommendations should be consulted and followed, and care taken to ensure that applications are made within the recommendations for each product.

First disperse Mobius in the spray tank (follow label 'Mixing' instructions), then add the other product(s), unless specified otherwise.

All mixes should be sprayed immediately and agitated throughout until the spray tank is empty. The user should ensure that all products to be tank-mixed with Mobius are approved for use on the crops which are to be sprayed. Always check individual product labels for any possible restrictions before making a tank-mix recommendation.
